

Investment Objective

The investment objective of FMWI is to generate regular income and long term capital appreciation for investors.

The Fund will invest primarily in a diversified portfolio of collective investment schemes, other investment funds, exchange traded funds (“ETFs”), securities, including but not limited to fixed income securities, equities, real estate investment trusts (“REITs”), money market instruments and cash as deemed appropriate by us in accordance with its investment objective.

Manager’s Commentary

Market Review

Developed market equities, led by US, witnessed a strong rebound in October with the S&P500 Index up 11.0% (in USD) and MSCI Europe up 7.2% (in USD) on the month. The combination of a weaker dollar and October’s mild weather in Europe was sufficient to allay worries of an imminent recession.

Asia, on the other hand, had a different experience with the MSCI Asia ex-Japan retreating -6.1% (in USD) after investors became worried with the consolidation of power in the hands of President Xi after China’s 20th National Congress. Within Asia, only Japan, Korea and India managed to post a positive return.

Fixed income markets globally continue to remain weak due to central banks’ tightening of monetary policy to combat inflation. The 10-year benchmark US Treasury bond yield increase 22 bps to 4.05%, and 10-year benchmark Singapore Government Bond yield was more or less stable at 3.43%, in October. The widening of credit spread drove JPMorgan Asia Credit Index (JACI) Investment Grade Total Return -2.7% lower in USD.

Historically, strong rebounds in risk assets after a sell-off in the prior month will need supportive fundamentals to be sustainable. The challenge this time is a Federal Reserve concerned with beating inflation back to 2% amid strong job numbers and high wage growth in a full employment economy. In fact, the November post-FOMC press conference, Powell suggested that the terminal Fed fund target rate is likely to be above what was indicated in the quarterly Summary of Economic Projections.

Away from the US, the data coming from monthly ISM and PMI surveys clearly suggests economic activities are declining due to a combination of central banks’ monetary policies, restrictive government policies and war in Ukraine. Recall in US, the implementation of earlier rounds of outsized fiscal stimuli was delayed and only started during the current administration. As a result, economic activities continue to remain strong. As of now, US financial assets are favoured over other regions’.

Investment Outlook

Monetary policy is unable to satisfactorily address elevated levels of inflation globally which stems from deficient aggregate supply that can only be resolved by increased production. We suspect central banks policies will ultimately lead Asia and Europe into recession within the next 12 months. US may be able to avoid one if inflation declines materially in the next six months to allow the Fed a chance to pause the hiking cycle at around 5%.

History suggests we should be wary with central banks’ tightening cycles as these episodes inevitably ended in recessions. We will remain vigilant even though October saw a rebound in developed market equities. We fear equity market has not fully priced in sustained higher rates or meaningful negative earnings revisions, and so downside risks remain in 2023.

Market will remain challenged in the short-term given the many uncertainties.

Investment Strategy

Asset Allocation

We are less negative on risky assets as valuation becomes more attractive. Beyond the near term, and assuming central banks are successful in their policy execution, market should be transitioning to a lower growth and lower inflation environment. As of now, cash is kept deliberately higher than usual to take advantage of the more attractive short end rates and to cushion the Fund from market volatility. We are watching the strength of dollar, bond yields plus credit spreads among other indicators to determine market’s appetite for risk assets.

Fixed Income

In fixed income, the Fund is defensively positioned. We are also exiting the investment grade China property bonds as the outlook continued to deteriorate.

SREITs

Portfolio is focus on bottom-up selection on REITs in re-opening plays as well as defensive names. Within the REITs, will continue to look for names that have acquisition potential with strong fundamentals coupled with valuations that remain attractive and have growth potential. We are also diversifying a small exposure to Singapore banks which will benefit from higher interest rate margin.

Equities

Within the equities sub-portfolio, we added slightly to our allocation in global equities.
